

THE ECO'S TIME

FRIDAY, AUGUST 13 2021

Due to the theme that is celebrated today, we have decided to highlight one of the organizations that puts the most care in caring for our planet Greenpeace is a company that motivates others to join the boom in caring for the planet.

Commemoration August 12, 2019

To support this cause direct the official website: Greenpeace.org or scan the QR code

The fight for the awareness of the planet continues, fires are reported in California USA for the summer.

NEW SECTION
Let's dive into the chemical benefits on page 4

Your Decisions Can Change the World

Never before had we seen a makeup as natural as ours, which is made from rice, saffron, water, and wheat, these are ingredients that are not harmful to your skin, and at the same time help the environment because our packaging and the product are biodegradable.

No sooner had we started the SENA project than we decided to make a change in the cosmetics industry.

Infections and skin aging are caused by the excessive use of chemicals in products, such as paraffin, rarely have we heard about products that are natural and don't affect the skin in the long term, that is why we decided to innovate. Beauty Junkie has several podcasts published on Spotify, we recommend you to listen to them and learn more about what our company has to offer.

**Do something good
for your skin and
for the
environment, buy
Beauty Junkie.**

Finally, during the process of creating our company, we learned a little about the context that surrounds Colombian entrepreneurs, all the accounting support for a company to perform, and we also learned that the teamwork is important in all the technical aspects of the company.

Save the Planet Taking Care of Our Beauty

As a complement to the academic and intellectual growth of the students, Margarita Bosco school has worked with the National Learning Service, SENA. This institution is well known for its variety of academic and didactic programs that give Colombians an opportunity to acquire new knowledge overcoming any economic problem. SENA has contributed to national education through its departments and web pages. For example, a great technician in accounting for commercial and financial operations is taught to 10° and 11° students by trained instructors, who constantly look for improvement of Colombian entrepreneurship. In this program, guides, workshops, and activities, are given to the students by each grade instructor; this support material has the objective to guide the creation of a company that represents each GAES' ideology.

For example, Jean Baptiste Ltda is a marketer company of flavorings articles. Perfumes, scented and flavoring candles are made of vegan and organic components that contribute to the conservation of our environment. Those products brings an excellent aroma to your house or office, you could save the planet of chemical products and take care of your beauty and create a pleasant atmosphere. On the other hand, many employment opportunities are given to teens who are prepared for job life by companies as Jean Baptiste. Actually SENA is recognized for giving great motivations to Margarita Bosco students.

By Karen Sofia Ortiz
Entrepreneurship writer

"It's time to think about our social and economic life with projects that improve the damage of the environment, creates employment, and generates better entrepreneurship."

Jean Baptiste Ltda.

Chemistry Teams Up With Innovation and Entrepreneurship

Caring for planet earth is not a game, therefore, to commemorate today's celebration, companies and organizations that are hybrids are being promoted; marketing and ecological. The new section of Eco's Time will be consolidated by chemistry as the main axis, biological factors are important, but the other branches of science can improve sustainable life.

Today we present the proposal made by Kolam SAS, this is a hybrid company that, despite marketing products for this characteristic Hindu art together with multiculturalism, is interested in the ecosystem, proposing from chemistry the use and creation of biodegradable polystyrene; It is a new polystyrene that will be decomposed by a chemical base of fungi a thousand times faster than the traditional one, this polystyrene takes 6 to 12 months, while the average takes up to 1000 years.

The impact of Biopolystyrene was promoted by ECOMunidad in Bogotá, Colombia, but Kolam SAS intends to give strength to the movement through its products focused on commerce.

SENA was founded by Rodolfo Martinez to improve education in Colombia, and this is reflected in the GAES designated in the Margarita Bosco 2021 School; the advice of the teachers in the STEAM project allowed to consolidate the chemical theoretical base of the research work.

Is the above all that Kolam has to offer? Of course not, in addition to its business and chemical research project, the company runs a podcast on the school's website. They are not only entrepreneurs, they are also multifaceted. With this company we have managed to obtain various knowledge, under no circumstances will it change its course and efficiency, since it has an ethical solidity.
